Chapter 4 Estimation - 2D Projective Transformations

Tomohiro Yasuda

2010/6/4

4.2 Different cost functions (1/4)

Algebraic distance :

DLT minimizes the sum of the next cost function, and we call ϵ_i the algebraic error vector.

$$d_{alg}(\mathbf{x}'_i, \mathbf{H} \mathbf{x}_i) = \|\epsilon_i\|^2 = \left\| \begin{pmatrix} \mathbf{0}^\top & -w_i' \mathbf{x}_i^\top & y_i' \mathbf{x}_i^\top \\ w_i' \mathbf{x}_i^\top & \mathbf{0}^\top & -x_i' \mathbf{x}_i^\top \end{pmatrix} \mathbf{h} \right\|^2$$

Advantage:

- very good accuracy
- a liner (and thus a unique) solution
- computational cheapness

Disadvantage:

Minimize this distance is not geometrically or statistically meaningful.

4.2 Different cost functions (2/4)

Geometric distance :

The estimated homography is the one for which the transfer error is minimized.

$$\sum_i d(x_i, H^{-1}x'_i)^2 + \sum_i d(x'_i, Hx_i)^2$$

assumption : point are measured to a very high accuracy

4.2 Different cost functions (3/4)

Reprojection error :

This method involves estimating a “correction” for each correspondence. Minimizing this cost function involves determining both \hat{H} and a set of subsidiary correspondence $\{\hat{x}_i\}$ and $\{\hat{x}'_i\}$.

$$\sum_i d(\mathbf{x}_i, \hat{\mathbf{x}}_i)^2 + \sum_i d(\mathbf{x}'_i, \mathbf{H} \hat{\mathbf{x}}'_i)^2$$

subject to $\hat{\mathbf{x}}'_i = \hat{H} \hat{\mathbf{x}}_i \forall i$.

Notation:

- \hat{x} : estimated measured image coordinates values of the points
- \bar{x} : true measured image coordinates values of the points

4.2 Different cost functions (4/4)

Comparison of geometric and algebraic distance :

Let $\mathbf{x}'_i = (x'_i, y'_i, w'_i)^\top$ and define a vector $(\hat{x}'_i, \hat{y}'_i, \hat{w}'_i)^\top = \hat{\mathbf{x}}'_i = \mathbf{H} \bar{\mathbf{x}}_i$.

Condition:

If $\hat{w}'_i = w'_i = 1$, the two distance are identical. . .

- The two distance are identical.
- The estimated homography $\hat{\mathbf{H}}$ is represented by an affine transformation.
- DLT algorithm can minimize gometric distance.
