

COMPETITOR : 19200 bds, 5ms/char, 90ms/line \Rightarrow throughput < 200 bytes/s

The screenshot shows a web browser window displaying a YouTube video. The video title is "Arduino Hex File Programming / Forth Programming Language" and it has 2,883 views. The video player shows a progress bar at 6:02 / 8:19. A "Tera Term Serial port setup" dialog box is overlaid on the video, showing settings for COM11, 19200 baud rate, 8 bit data, none parity, 1 bit stop, and none flow control. To the right of the video player, there are several video recommendations, including "Locating arduino hex files | Arduino Hacks", "Upload HEX file to Arduino", "Going from Arduino to ARM", "How to Read HEX File From Micro Controller", and "Floating Away with AmForth".

FAST FORTH 8MHz : 2457600 bds, 0ms/char, 0ms/line \Rightarrow throughput : 100 kB/s

The screenshot shows a Tera Term terminal window displaying Forth code. The code includes comments and instructions for setting up a serial port connection. A "Tera Term: Config. port série" dialog box is overlaid on the terminal, showing settings for COM3, 2457600 baud rate, 8 bit data, none parity, 1 bit stop, and Xon/Xoff flow control. The dialog also has fields for "Délai de transmission" (transmission delay) in msec/char and msec/line, both set to 0.
